Elaenia Vue SPA v1.0

Elaenia template as a Vue.js Single Page Application.

Usage

Assets are pre-compiled (js/css). Point your server to the public folder, and you're ready.
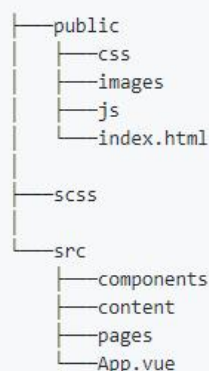

Compile JS and SCSS assets:

On your command-line, navigate to project root folder (with package.json), and run one of the following sets of commands:

- Development: `npm run js-dev && npm run css-dev`
- Production: `npm run js-prod && npm run css-prod`
- For Ongoing Development, run the following commands in separate windows/tabs:

```
npm run js-watch
npm run css-watch
```

These commands create 'app.js' and 'app.css', and then saved in '/public/js' and '/public/css' respectively.

Structure

```
├──public
│   ├──css
│   ├──images
│   ├──js
│   └──index.html
│
├──scss
│
└──src
    ├──components
    ├──content
    ├──pages
    └──App.vue
```

- **public:**

  Files available to the public (js/css).

- **scss:**

  Uncompiled scss files; converted to css after running the NPM commands shown above in Usage section.

- **src:**

  Uncompiled vue component files. Each file in '/src/pages' represents a web-page. While '/src/components' and '/src/content' are reusable portions of pages.
